# Chapter 1

## Introduction

This specification defines a set of Java APIs for the development of Model-View-Controller (MVC) applications. Readers are assumed to be familiar with the MVC design pattern.

This is the early draft release of version 1.0. The issue tracking system for this release can be found at:

### 1.1 Goals

The following are the goals of the API:

**Goal 1** TBD

### 1.2 Non-Goals

## 1.3 Conventions

The keywords ‘MUST’, ‘MUST NOT’, ‘REQUIRED’, ‘SHALL’, ‘SHALL NOT’, ‘SHOULD’, ‘SHOULD NOT’, ‘RECOMMENDED’, ‘MAY’, and ‘OPTIONAL’ in this document are to be interpreted as described in RFC 2119[?].

Java code and sample data fragments are formatted as shown in figure 1.1:

Figure 1.1: Example Java Code

```
1 package com.example.hello;
2
3 public class Hello {
4     public static void main(String args[]) {
5         System.out.println("Hello World");
6     }
7 }
```

URIs of the general form ‘http://example.org/...’ and ‘http://example.com/...’ represent application or context-dependent URIs.

All parts of this specification are normative, with the exception of examples, notes and sections explicitly marked as ‘Non-Normative’. Non-normative notes are formatted as shown below.

**Note:** *This is a note.*

## 1.4 Terminology
